The Strength of WiMAX

Technical Performance

- **Lowest cost, all IP network**
- **IEEE standard equipment with many vendors**
- **Best available multi-megabit bandwidth**
- **Scalable device design-in & certification**

New Business Model

- **New Low cost embedded devices**
- **Low cost & flexible service plans**
- **New spectrum**
- **Open Internet access**
- **New activation & distribution models**

“Mobile WiMAX delivers 4x the throughput of other technologies at one tenth cost” - Barry West, President 4G Business

Primary Broadband Services

Primary Broadband: Mobile WiMAX Connecting Homes and Buildings

Bridging the digital divide

Promoting competitive challengers

Personal Broadband Services

Personal Broadband – Mobile WiMAX Connecting Individuals

Enjoy personal broadband services that are accessible anytime and everywhere

Government, Security and Municipal Broadband Applications

Versatile Broadband Services

Catering to a variety of customer applications

WiMAX Industry Ecosystem

2006

**WiMAX Certified
devices for Fixed
Services**

2008

**Portable WiMAX
Certified™ Devices for
Portable Services**

2009

**WiMAX handsets and
mobile entertainment
Devices**

**Content Providers /
Ecosystem
(28%)**

**Chip/ Component
Suppliers

Certification Labs

Mobile WiMAX Certification Labs

WiMAX Supports a Wide Variety of Devices

**Fixed & Portable
Devices**

**Business
Devices**

**Entertainment
devices**

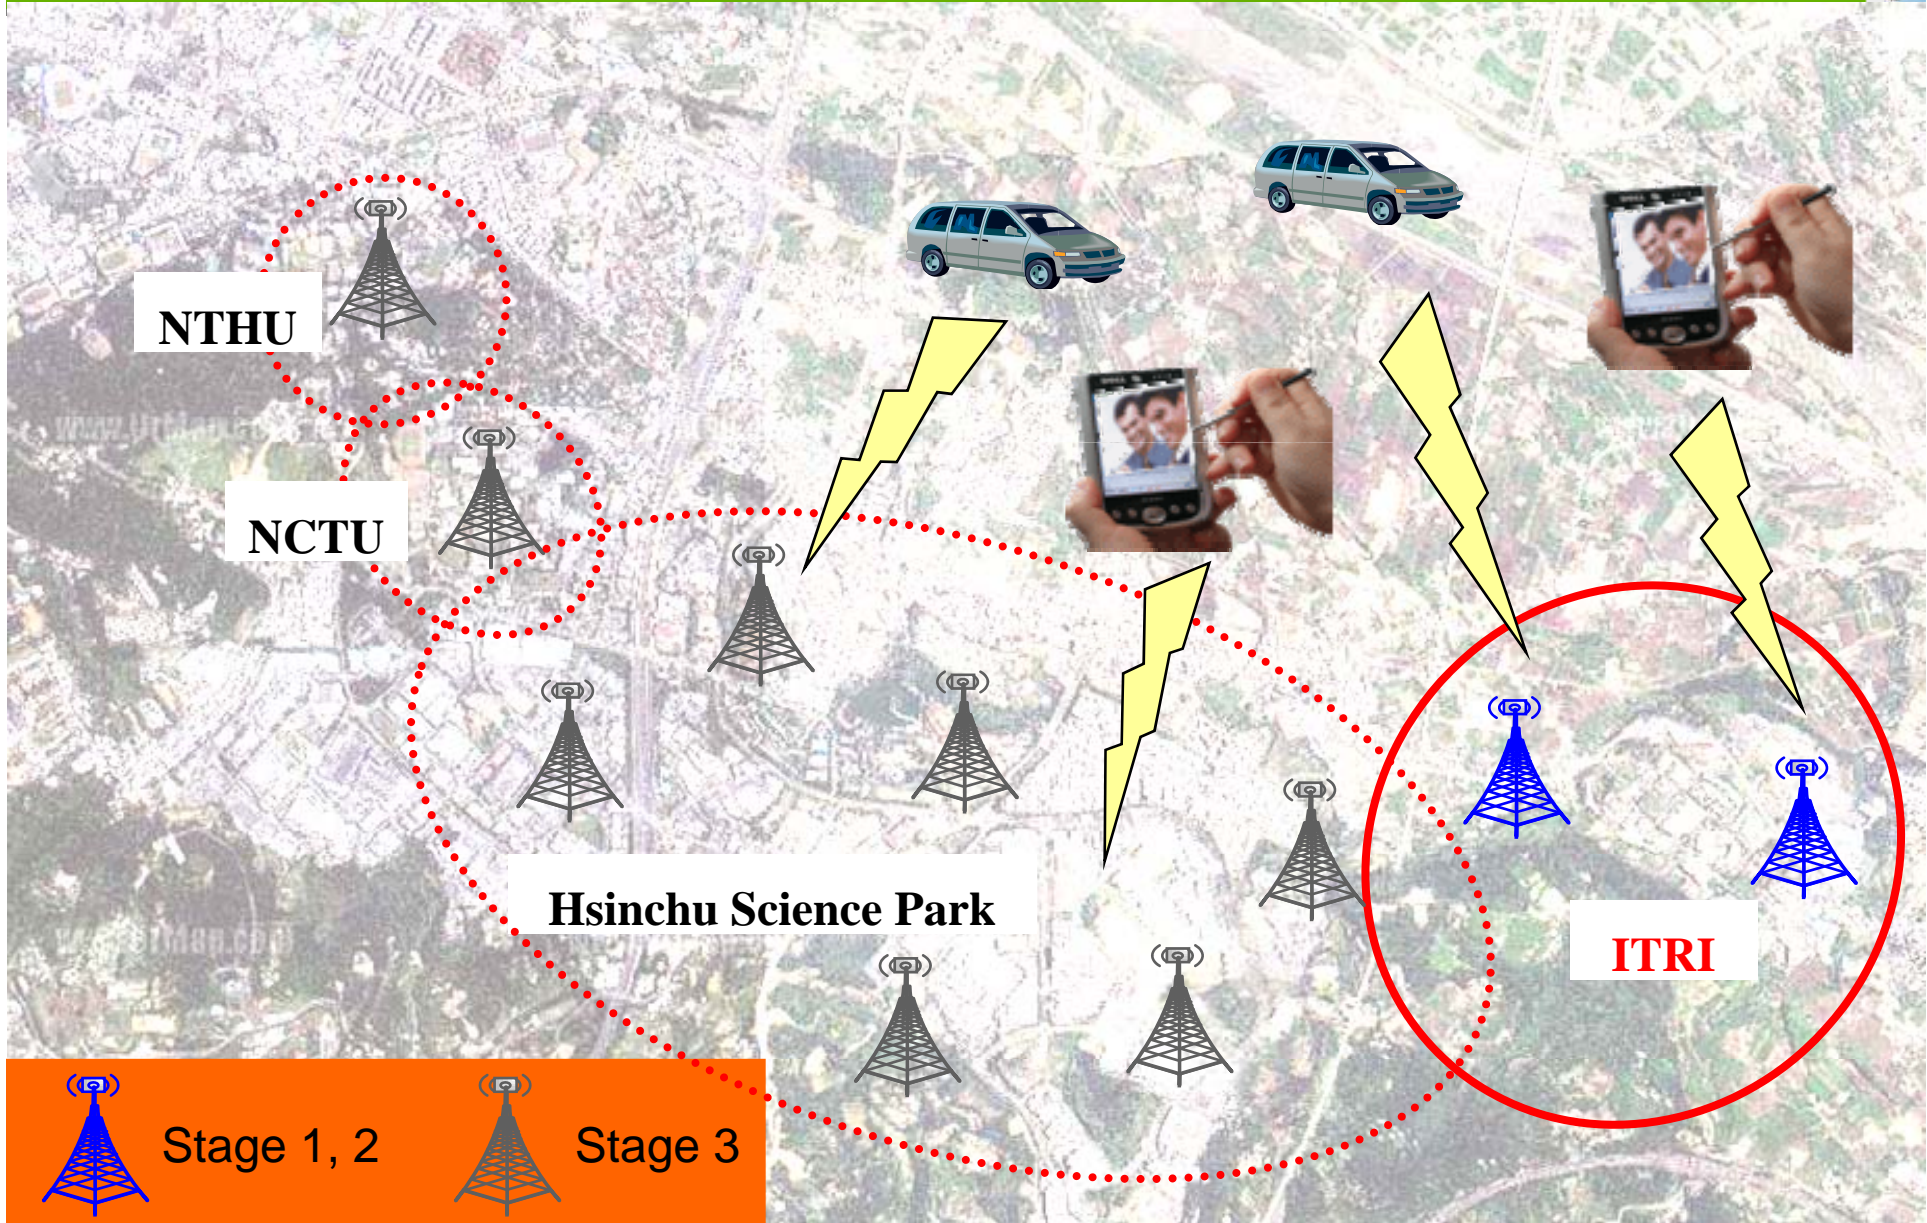

M-Taiwan WiMAX Applications Lab

13

- **First proof-of-concept lab endorsed by WiMAX Forum**
- **An open program to promote innovative applications**
- **Taiwan Lab serves as a model for proof-of-concept**
- **Lab at Industrial Technology Research Institute (ITRI) Campus in Hsinchu**
- **Alvarion solution used for test be**

MTWAL Network Coverage

- **Major auction in US**
- **Allocation likely in many countries**
- **WiMAX Forum working on defining profiles for 700Mhz**
- **700 MHz deployment is a good compliment to 2.5GHz and 3.5 GHz networks**
- **Deployment advantages in rural and low density regions**
- **WiMAX Ecosystem is gearing up to provide solutions in 2009**

WiMAX Forum – Certification

Proprietary Information

802.16 Certification by WiMAX Forum (1)

- **One of the main objectives of WiMAX Forum is certification of equipment**
 - Before certification labs are ready, Plugfests are conducted to promote interoperability
 - Certification is developed for system profiles for specific band-classes
- **A system profile is a list of 802.16 features where next to each feature is indicated whether it is mandatory or not.**
- **Band-classes are defined by the triplet:**
 - Frequency, Duplexing Method (TDD, FDD, HD-FDD), Channel Bandwidth
- **Certification is conducted for profiles and bandclasses that are supported by at least 3 manufacturers**

802.16 Certification by WiMAX Forum (2)

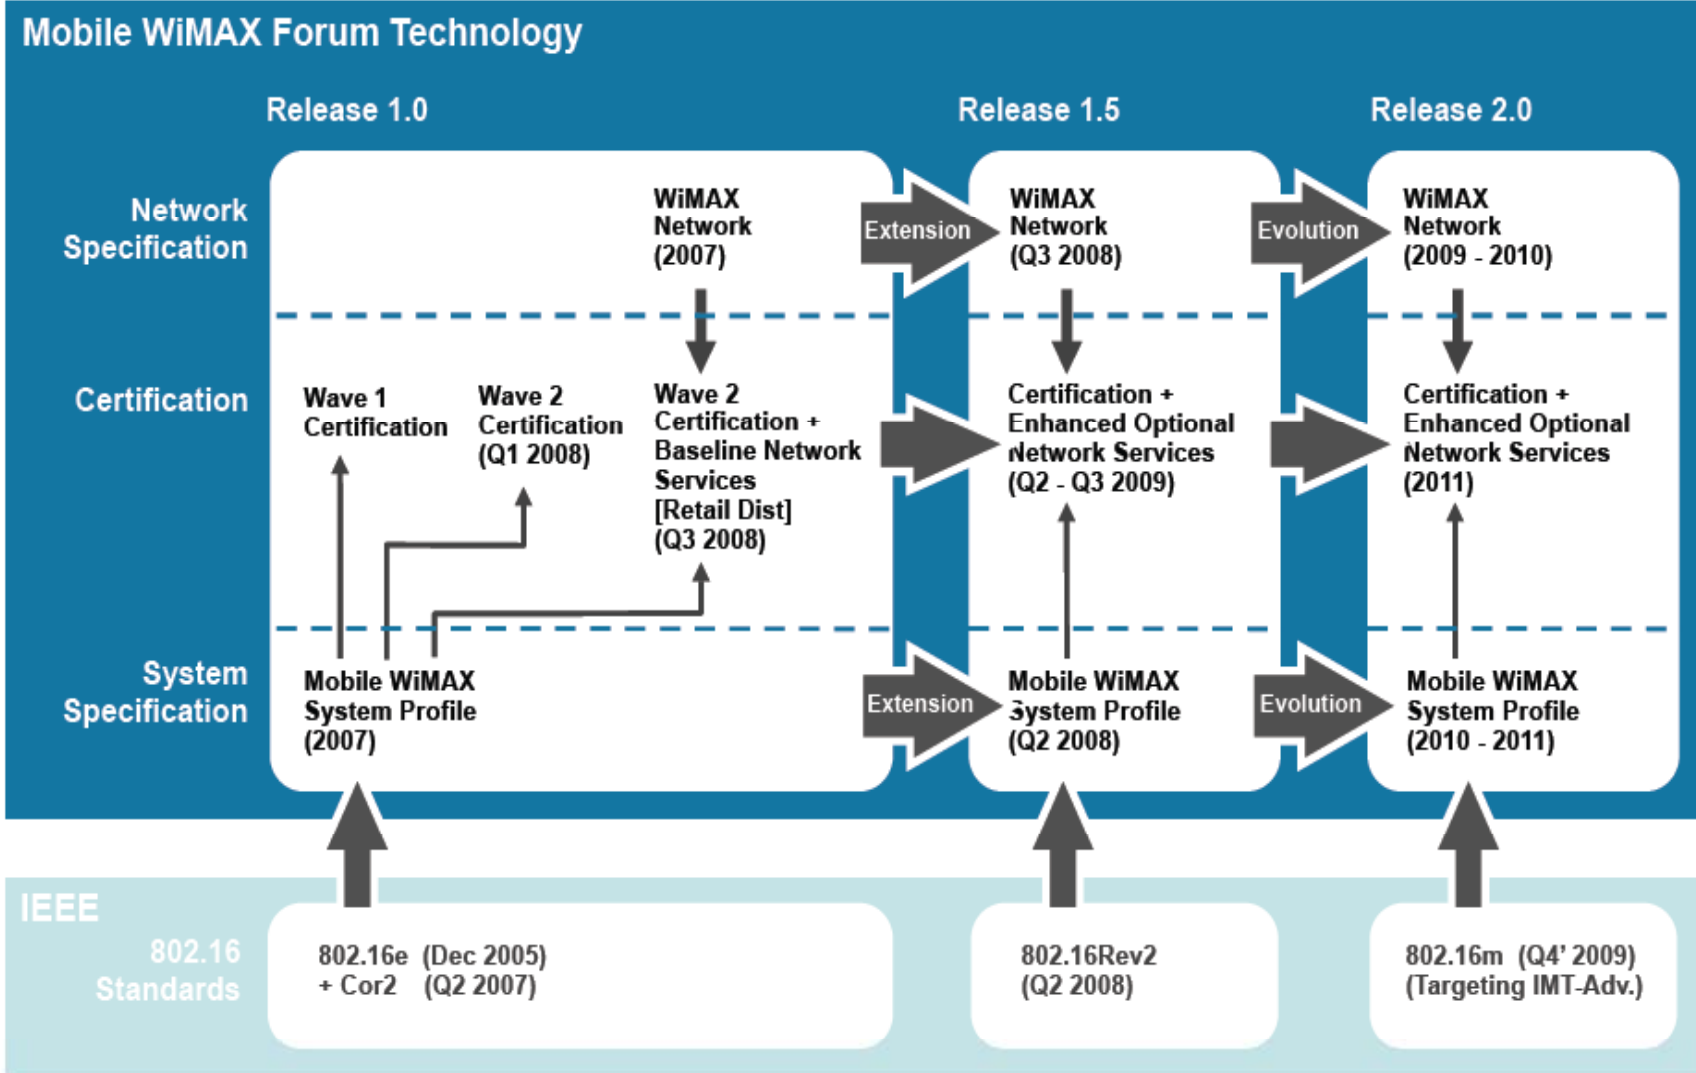

- **Certification is comprised of three types of testing: PCT, RCT, MIOT**
 - PCT – Protocol Conformance Testing: MAC
 - RCT- Radio Conformance Testing: Radio + PHY
 - MIOT – Interoperability Testing
- **Certification is divided into “Waves”, as features are developed by manufacturers and testing scripts are developed**
- **For Mobile WiMAX each wave was further subdivided into phases to facilitate swifter service introduction**

Mobile WiMAX Roadmap

Mobile WiMAX Release	Air protocol	Network Protocol	Main features	Certification Schedule
Release 1.0	802.16e-2005	NWG 1.0	TDD MIMO E2E IP network	Wave 1 – April'08 Wave 2 – start @June08
Release 1.5	802.16REV2	NWG 1.5	FDD (+ TDD) VoIP optimizations	H2'09
Release 2.0	802.16m	NWG 2.0	TDD + FDD Improved performance	2010-2011

WiMAX Forum Evolution Vision

A fully backward compatible evolution on standards and products

Certification Schedule of Mobile WiMAX Release 1.0

		Description	Lead Operator	Band-class (Freq, BW, Duplex)	WiMAX Estimated dates	ALVR Estimated dates	Comments
Wave 1	Phase 1	Very basic operation	KT	2.3GHz, 8.75MHz, TDD	Apr'08		Wave 1 does not include MIMO/BF For Korea WiBRO service ONLY H-ARQ - excluded from Phase 1
	Phase 2						Deleted by Board in Taiwan Oct'2007
Wave 2	Phase 1	MIMO Mandatory for MS	SPRINT	2.5GHz, 5MHz and 10MHz, TDD	Q2'08	June '08 - Oct. '08	
	Phase 2	MS has also BF Mandatory	SPRINT	2.5GHz, 5MHz and 10MHz, TDD	Q3'08	Q4'08 - Q1'09	Mobile WiMAX

- **Wave 1 Phase 1 happened already (PR in April'08)**
 - **Limited to S. Korea**
- **Wave 2 Phase announced in Amsterdam in June 17, 2008**
 - **Alvarion CERTIFIED!**

What was certified recently?

22

- **Wave 2 certification includes 10 Mobile WiMAX MIMO 2.5 GHz products (MP05 certification)**
 - 4 Base Station products
 - 6 'Subscriber Units' (CPE's)
- **Who received Base Station certification?**
 - Alvarion
 - Sequans
 - Motorola
 - Samsung
- **Who received MS certification?**
 - Intel
 - Zyxel
 - Airspan
 - Beceem
 - Samsung
 - Sequans

Proprietary Information

WiMAX Forum Certification for BreezeMAX 16e 2.5 GHz

23

CERTIFICATION CERTIFICATE

COMPANY NAME Alvarion

CERTIFICATION DATE June 14, 2008

CERTIFICATION PROFILE MP05

PRODUCT MODEL BreezeMAX 802.16e 2.5 GHz
TRADEMARK BreezeMAX®
DEVICE TYPE Base Station
CERTIFICATION NUMBER 01-0000000043
CERTIFICATION REQUIREMENTS STATUS LIST Version 1.9.0

CERTIFICATION PROFILE DETAIL 2.496-2.69GHz, 5+10MHz, TD

SOFTWARE VERSION 21.7.10 (REL 2)

HARDWARE VERSION BMAX 2500

TESTED BY AT4 wireless Laboratories, Malaga, Spain

Handwritten signature of Ron Resnick in blue ink.

Wave 2 Phase 1 certification

- **MIMO**
 - **MIMO (both UL and DL) is mandatory on MS side but optional for BST**
 - **Alvarion provided BST with DL MIMO and UL MIMO**
 - **To assist in MS certification**
 - **Alvarion certification includes the optional (at BST) MIMO features!**

Certification Status – 2.5 GHz

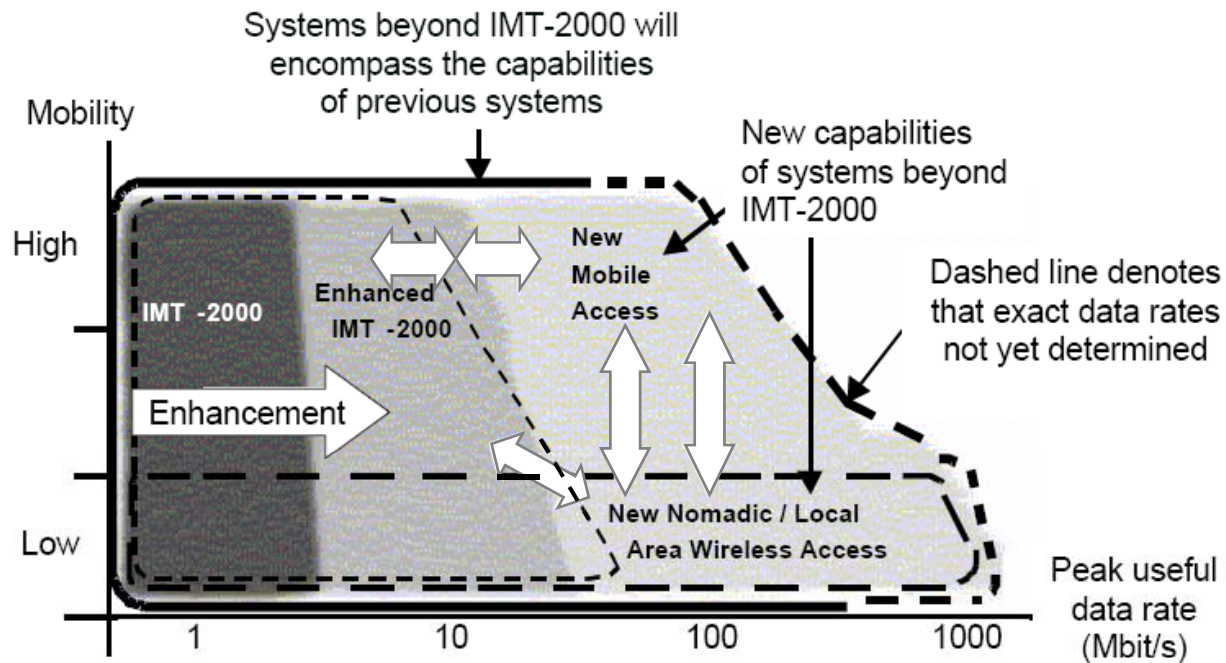

- **Certification has two processes**
 - Validation of test equipment and of the test protocols
 - Certification of individual equipment vendors
 - Alvarion is participating in both processes
- **Presently WF is continuing working on Validation and Certification of phase 2 of mobile WiMAX Wave 2**
 - for 2.5GHz and 10MHz BW (5MHz as well)
- **Goal to complete phase 2 of Wave 2 towards October'08**
 - Though possibly may take till end of 2008

IEEE802.16m – targeting IMT-Advanced

IMT-Advanced

- ITU is looking at next generation of mobile technology under the umbrella of IMT-Advanced
 - 1 Gb/s stationary, 100 Mb/s mobile

KEY: Denotes interconnection between systems via networks, which allows flexible use in any environment without making users aware of constituent systems

Nomadic / Local area access systems

Digital broadcast systems

IEEE 802.16m Project

- **Scope**

- Defines a 802.16 Advanced amendment to create a standard suitable for IMT-Advanced
- Expects to significantly improve mobile performance more than 2-3X the current 802.16e capabilities

- **Status/Schedule**

- IEEE 802.16m Project was started in Task Group m (TGm) in Jan 2007
- TGm has developed a System Requirements Document (SRD) and an Evaluation Methodology Document (EMD)
- TGm is developing a System Description Document (SDD) that is the architecture and design of the 802.16m air interface that expected to complete in Nov 2008
- An initial IMT-Advanced candidate submission based on 802.16m SDD is planned for Jan 2009
- The 802.16m standard is expected to be complete by March 2010

802.16 Evolution for IMT-Advanced

- Continuation project named 802.16m
- Targeted to meet the requirements of IMT-Advanced
- Backwards compatibility to 802.16e
 - 802.16e CPEs will work with 802.16m BSs
 - 802.16e BSs will be able to operate in 802.16m network
- Provides confidence to operators that 802.16 technology is future proof
- Provides security for current investments

4

Conclusions

Conclusion

- **WiMAX enables a new open internet model**
 - WiMAX provides superior performance than any other wireless technology available today
- **WiMAX has global momentum**
 - 260+ deployments
 - Thriving ecosystem
 - Major initiatives in US, Japan, India, Taiwan, Europe
 - 700MHz represents new opportunity
- **State of the art certification program will drive economies of scale**
- **Certification**
 - Wave 1 → Korea only, April'08
 - Wave 2 Phase 1 → MIMO, June'08
 - Wave 2 Phase 2 → MIMO+BF, EOY'08
- **Long term technology**
 - 16m – next generation air-protocol, backwards compatible to 16e and enhanced performance
